Ineffective Management of Health Management To Mr. M with a history of diarrhea in RT03 / RW02
Candirejo Village

xiii + 45 pages + 2 pictures + 13 tables + 4 appendices

ABSTRACT

The risk of behavior health, elderly and smoke tend is resistance of ability which transform the style of the life and behavior by a way to add more status of health.

Action and effort it comes back to every one of us, to maintain and care about our health so that we can not get sickness or effect in to our life, the original sickness once our health so that person that smokes the cigarette, the action which is giving us the affection like wound, violence, alcohol and the medicine which is provide.

The way which is good, is giving us the mentoring. Good education, and good health. Also teaching people how to progress the behavior of health, which is giving risk to family. Management from Mr. M families are doing this during 2 days. Management uses nursing care that consists of assessment, diagnosis, intervention, implementation and evaluation. The assessment direct to family, the intervention by conducting health education and teach. The implementation that has already been done is that assessment of smoking with flipchart media and leaflet.

The results of management which we got is that strip from the conduct of health the families give the answer very good about the behavior that gives the risk patient. The families of patient, they want to follow the law so that they can maintain or take care health the last reason is that the commitment for health also solve in some area.

The suggestion from families, they hope that they will explain well in the style of life good health to take care health and use the facilities of health that have, take care be auty with responsibility and best on the function family.
