**KNOWLEDGE OF PREGNANT WOMEN ABOUT NUTRITION IN
NORMAL PREGNANCY IN THE PUBLIC HEALTH CENTER OF VILLAGE
PIJOT AT THE WORKING AREA IN KERUAK DISTRICT, EAST
LOMBOK DISTRICT**

ABSTRACT

Background: *Nutrition affects the process of maternal pregnancy and fetal growth. Nutrition of pregnant women is not seen from the number of portions eaten but the content consumed. When pregnant women experience a lack of nutritional intake, it is very easy for pregnant women to suffer from iron deficiency. The nutritional elements needed by pregnant women are carbohydrates, proteins, fats, vitamins and minerals. The research objective was to describe the knowledge of pregnant women about nutrition in normal pregnancy at the working area of the public health center of village Pijot, Keruak district, East Lombok district.*

Methods: *This type of research uses quantitative research with descriptive methods, sampling techniques with a total sampling of 81 samples, with a questionnaire research instrument using univariate analysis*

Results: *The results showed that most of the 81 pregnant women had sufficient knowledge about nutrition in normal pregnancy, namely good knowledge 5 (6.2%), sufficient 62 (76.5%), less 14 (17.3%) on the majority. characteristics of housewives (IRT) and multigravida parity.*

Conclusion: *The research from 81 pregnant women mostly had sufficient knowledge as much as 62 (76.5%)*
