**Tingkat Pengetahuan Masyarakat Tentang Covid-19 dan Perilaku
Masyarakat Di Masa Pandemi Covid-19 Di Kelurahan Tampang Tumbang
Anjir Kecamatan Kurun Kabupaten Gunung Mas**

ABSTRAK

Latar Belakang: Corona virus merupakan virus jenis baru dengan nama SARS-CoV-2 (*Severe Acute Respiratory Syndrome Coronavirus-2*) yang disebut Corona virus disease 2019 (COVID-19). Saat ini virus corona menyebar di berbagai negara hingga di tanah air Indonesia yang menyebabkan kekwatiran dan krisis baik di bidang kesehatan maupun ekonomi. Tujuan penelitian ini untuk mengetahui tingkat pengetahuan dan perilaku masyarakat terhadap Covid-19 di Kelurahan Tampang Tumbang Anjir Kecamatan Kurun Kabupaten Gunung Mas.

Metode: Penelitian ini merupakan penelitian kuantitatif non eksperimental yang menggunakan jenis penelitian deskriptif analitik dengan pendekatan *cross sectional* (potong lintang). Pengambilan sampel pada penelitian ini menggunakan teknik *consecutive sampling* berjumlah 100 responden. Instrumen penelitian berupa kuisioner tertutup melalui *google form*. Analisis data secara deskriptif dan uji korelasi gamma.

Hasil: Responden dengan pengetahuan baik sebesar 83 responden (83%), tingkat pengetahuan cukup sebesar 16 responden (16%), dan tingkat pengetahuan kurang hanya sebesar 1%. Perilaku yang baik sebesar 81 responden (81%), perilaku cukup sebesar 18 responden (18%), dan perilaku kurang sebesar 1 responden (1%). Sedangkan hubungan tingkat pengetahuan dan perilaku masyarakat di masa pandemi Covid-19 didapatkan analisis uji gamma nilai $p = 0,000 (<0,05)$ dan koefisien korelasi value 0,913 (0,76-0,99).

Simpulan: Mayoritas responden memiliki pengetahuan baik tentang Covid-19 sebanyak 83 responden (83%) dan perilaku yang baik sebesar 81 responden (81%). Sedangkan hubungan tingkat pengetahuan dan perilaku memiliki hubungan signifikan dengan nilai p di bawah 0,05 yaitu 0,000 dan koefisien korelasi value 0,913 masuk range 0,76-0,99 dengan tingkat kekuatan hubungan yang sangat kuat.

Kata Kunci: Covid-19, Pengetahuan, Perilaku

**The Level of Public Knowledge About Covid-19 And Community Behavior
During the Covid-19 Pandemic In Tampang Tumbang Anjir Village, Kurun
District, Gunung Mas Regency**

ABSTRACT

Background: Corona virus is a new type of virus, the virus is called SARS-CoV-2 (Severe Acute Respiratory Syndrome Coronavirus-2) is called Corona virus disease 2019 (COVID-19). Currently, the corona virus is spreading in various countries to Indonesia, causing worries and crises both in the health and economic fields. The purpose of this study was to determine the level of community knowledge and behavior towards Covid-19 in Tampang Tumbang Anjir Village, Kurun District, Gunung Mas Regency.

Methods: This research is a non-experimental quantitative research that uses descriptive analytic research with a cross sectional approach (cross-sectional). Sampling in this study used a consecutive sampling technique totaling 100 respondents. The research instrument was a closed questionnaire via a google form. Descriptive data analysis and gamma correlation test.

Results: Respondents with good knowledge were 83 respondents (83%), sufficient knowledge level was 16 respondents (16%), and less knowledge level was only 1%. good behavior is 81 respondents (81%), sufficient behavior is 18 respondents (18%), and less behavior is 1 respondent (1%). Meanwhile, the relationship between the level of knowledge and community behavior during the Covid-19 pandemic was obtained by analyzing the gamma test with a value of $p < 0.000$ (< 0.05) and a correlation coefficient value of 0.913 (0.76-0.99).

Conclusion: The majority of respondents have good knowledge about Covid-19 as many as 83 respondents (83%) and good behavior by 81 respondents (81%). While the relationship between the level of knowledge and behavior has a significant relationship with p value below 0.05 which is 0.000 and the correlation coefficient value of 0.913 is in the range 0.76-0.99 with a very strong level of relationship strength.
