Hubungan Antara Keaktifan Kunjungan Posyandu Dengan Pengetahuan Ibu Tentang Deteksi Dini Pertumbuhan Balita Di Desa Tlogopucang Kecamatan Kandangan Kabupaten Temanggung Tahun 2020

(xvii + 73 halaman + 11 tabel + 2 bagan + 9 lampiran)

ABSTRAK

Latar Belakang : Posyandu adalah progam untuk memudahkan masyarakat dalam mengetahui atau memeriksakan kesehatan. Keaktifan ibu dan balita datang ke Posyandu berperan penting untuk pemantauan dan deteksi dini perkembangan balita. Ibu yang aktif datang ke posyandu memperoleh akan informasi deteksi dini pertumbuhan yang diberikan oleh kader atau pun dari petugas kesehatan. **Tujuan penelitian :** Mengetahui Hubungan Antara Keaktifan Kunjungan Posyandu Dengan Pengetahuan Ibu Tentang Deteksi Dini Pertumbuhan balita di Desa Tlogopucang Kecamatan Kandangan Kabupaten Temanggung". **Metode :** Jenis penelitian Analitik Korelasi dengan rancangan penelitian Cross Sectional. Jumlah populasi sebanyak 363 orang sehingga jumlah sampel 78 responden, menggunakan metode Propotional Random Sampling dengan instrument penelitian kuesioner. Analisis data menggunakan Analisis Bivariat. **Hasil :** Hasil penelitian keaktifan kunjungan posyandu aktif yaitu sebesar 69 responden (88,5%) dan tidak aktif yaitu sebesar 9 responden (11,5%). pengetahuan deteksi dini pertumbuhan yang baik yaitu sejumlah 69 orang (88,5%) dan pengetahuan yang kurang sejumlah 9 orang (11,5%). Ada hubungan keaktifan kunjungan posyandu dengan pengetahuan tentang deteksi dini pertumbuhan dengan p value = 0,000.

Simpulan : Ada hubungan keaktifan kunjungan posyandu dengan pengetahuan tentang deteksi dini pertumbuhan dengan p value = 0,000.

Kata Kunci : Keaktifan, Pengetahuan, Posyandu, Deteksi Dini Pertumbuhan

The Relationship Between Active Posyandu Visits With Mother's Knowledge About Early Detection of Toddler Growth in Tlogopucang Village, Kandangan Subdistrict, Temanggung Regency in 2020

(xvii + 73 pages + 11 tables + 2 charts + 9 attachments)

ABSTRACT

Background: Posyandu is a program to make it easier for people to find out or check their health. The activeness of mothers and toddlers coming to Posyandu plays an important role in monitoring and early detection of toddler development. Mothers who actively come to the posyandu will receive information on early detection of growth provided by cadres or from health workers.

The research objective: To determine the relationship between active posyandu visits with maternal knowledge about early detection of growth in Tlogopucang village, Kandangan sub-district,Temanggung district "

 Method: This type of research is analytical correlation with cross sectional research design. The total population was 363 people so that the total sample was

78 respondents, using the proportional random sampling method with a questionnaire research instrument. Data analysis using Bivariate Analysis.

 Results: The results of the research on active posyandu visits were 69 respondents (88.5%) and 9 respondents (11.5%) were inactive. Good growth early detection knowledge, namely 69 people (88.5%) and less knowledge of 9 people (11.5%). There is a relationship between active posyandu visits with knowledge about early detection of growth with p value = 0.000.

Conclusion: There is a relationship between active posyandu visits with knowledge of early growth detection with p value = 0.000.

Keywords: Activeness, Knowledge, Posyandu, Early Growth Detection
