## **HUBUNGAN PENGETAHUAN AKSEPTOR TENTANG KB SUNTIK 3 BULAN DENGAN KEPATUHAN KUNJUNGAN ULANG DI PMB RENI PUJI RAHAYU DESA GILING KECAMATAN GUNUNGWUNGKAL KABUPATEN PATI TAHUN 2021**

**(xvi + 64 halaman + 8 tabel + 2 bagan + 7 lampiran )**

### **ABSTRAK**

**Latar Belakang:** Kontrasepsi KB suntik 3 bulan adalah kontrasepsi suntik yang memiliki efektifitas yang tinggi, asal penyuntikan dilakukan secara teratur sesuai jadwal yang telah ditentukan. Menurut BKKBN masalah khusus yang sering terjadi dari pemakaian KB suntik adalah tidak patuh dengan jadwal kunjungan ulang. Hasil studi pendahuluan didapatkan bahwa pengetahuan baik ada yang tidak patuh, dan pengetahuan kurang tapi ada yang patuh. Berdasarkan latar belakang dan fenomena yang terjadi maka penulis tertarik untuk melakukan penelitian. Tujuan penelitian ini untuk mengetahui hubungan pengetahuan akseptor KB suntik 3 bulan dengan kepatuhan kunjungan ulang di PMB Reni Puji Rahayu Desa Giling Kecamatan Gunungwungkal Kabupaten Pati Tahun 2021.

**Metode:** Desain penelitian ini menggunakan analitik korelasi dengan pendekatan *cross sectional*. Populasi dalam penelitian ini adalah seluruh akseptor pada bulan November KB suntik 3 bulan berjumlah 57 orang, cara pengambilan sampel dengan menggunakan *total sampling* dimana jumlah sampel sama dengan populasi. Data dianalisis dengan melakukan uji analisis *chi-square*.

**Hasil:** Didapatkan sebagian besar responden berpengetahuan baik dan cukup sebanyak 24 responden (42,1%), dan sebagian besar responden tidak patuh dalam melakukan kunjungan ulang sebanyak 33 responden (57,9%). Dilakukan uji chi square pada pengetahuan dan kepatuhan dengan hasil nilai P value sebesar  $0,000 < \alpha (0,05)$  maka  $H_0$  diterima, artinya ada hubungan yang signifikan antara pengetahuan akseptor kb suntik 3 bulan dengan kepatuhan kunjungan ulang.

**Kesimpulan:** Dapat disimpulkan ada hubungan yang signifikan antara pengetahuan akseptor KB suntik 3 bulan dengan kepatuhan kunjungan ulang. Di PMB Reni Puji Rahayu, Desa Giling Kecamatan Gunungwungkal Kabupaten Pati Tahun 2021.

**Kata Kunci:** Pengetahuan, Suntik KB 3 Bulan, Kepatuhan

## **RELATIONSHIP OF ACCEPTOR KNOWLEDGE ABOUT 3 MONTHS INJECTING KB WITH RETURN VISIT AT PMB RENI PUJI RAHAYU VILLAGE GILING, GUNUNGWUNGKAL DISTRICT, PATI REGENCY IN 2021**

**(xvi + 64 pages + 8 tables + 2 chart + 7 attachments)**

### **ABSTRACT**

**Background:** 3-month injectable contraception is an injectable contraceptive that has a high effectiveness, as long as the injections are carried out regularly according to a predetermined schedule. According to the BKKBN, a special problem that often occurs from the use of injectable contraceptives is not complying with the schedule for repeat visits. The results of the preliminary study found that some have good knowledge who do not comply, and lack of knowledge but some are obedient. Based on the background and the phenomena that occur, the authors are interested in conducting research. The purpose of this study was to determine the relationship between knowledge of 3-month injection family planning acceptors and compliance with repeat visits at PMB Reni Puji Rahayu, Giling Village, Gunungwungkal District, Pati Regency in 2021.

**Method:** This research design uses correlation analytic with cross sectional approach. The population in this study were all acceptors in November of 3 months injection KB totaling 57 people, the sampling method was using total sampling where the number of samples was the same as the population. Data were analyzed by performing chi-square analysis test.

**Result:** It was found that most of the respondents had good and sufficient knowledge as many as 24 respondents (42.1%), and most of the respondents did not comply in making repeat visits as many as 33 respondents (57.9%). A chi square test was carried out on knowledge and compliance with the results of the P value of  $0.000 < (0.05)$  then  $H_a$  was accepted, meaning that there was a significant relationship between knowledge of 3-month injection family planning acceptors and adherence to repeat visits.

**Conclusion:** It can be concluded that there is a significant relationship between knowledge of 3 month injection family planning acceptors and adherence to repeat visits. At PMB Reni Puji Rahayu, Giling Village, Gunungwungkal District, Pati Regency in 2021.

**Keywords:** Knowledge, 3 Months KB Injection, Compliance
