**Hubungan Dukungan Suami Terhadap Kunjungan K4 Di Desa Mudal Dan  
Slukatan Kecamatan Mojotengah Kabupaten Wonosoho Tahun 2021**  
(xv + 91 halaman + 9 tabel + 15 lampiran )

**ABSTRAK**

**Latar Belakang :** Komplikasi pada kehamilan dan persalinan penyebab tertinggi kematian Ibu hal ini dapat di cegah dengan keteraturan pemeriksaan kehamilan. Capaian kunjungan K4 di Desa Mudal dan Slukatan dari tahun 2019 sampai tahun 2020 mengalami penurunan. Di Desa Mudal dan Slukatan di dapatkan 10 ibu hamil Trimester III, 4 ibu hamil mendapatkan dukungan dari suami melakukan kunjungan ANC secara lengkap dari 4 ibu hamil yang di beri dukungan ada 1 ibu hamil yang tidak melakukan kunjungan kehamilan secara tidak lengkap. Sedangkan 6 ibu hamil yang tidak di berikan dukungan, namun pada status kunjungan ada 4 ibu hamil yang tidak melakukan kunjungan secara lengkap dan 2 ibu hamil lainnya kunjungan lengkap.

**Tujuan Penelitian :** Untuk Mengetahui Hubungan Dukungan Suami Terhadap Kunjungan K4 di Desa Mudal dan Slukatan Kecamatan Mojotengah Kabupaten Wonosobo Tahun 2021.

**Metode Penelitian :** Penelitian ini menggunakan desain deskriptif korelasional dengan pendekatan *Case Control*. Populasi dalam penelitian ini adalah ibu hamil TM III dengan usia kehamilan >36 minggu berjumlah 78 ibu hamil. Tehnik pengambilan sampel menggunakan total sampling pada sampel kasus sebanyak 31 responden serta pada kelompok kontrol menggunakan tehnik *Purposive Sampling* sebanyak 38 responden . analisis yang di gunakan Analisa data menggunakan uji *Chi-Square*.

**Hasil Penelitian :** Hasil penelitian didapatkan sebagian responden mendapatkan dukungan baik sebanyak 38 (55,1%) dan kunjungan K4 lengkap, dan yang mendapat dukungan kurang sebanyak 31 (41,9%) dan kunjungan K4 tidak lengkap. Dari hasil analisis univariat sebagian kecil responden dengan dukungan baik tidak melakukan kunjungan K4 secara tidak lengkap sebanyak 3 (9,7%), kemudian sebagian kecil responden dengan dukungan kurang melakukan kunjungan K4 secara lengkap sebanyak 3 respondnen (7,2%). Berdasarkan uji *Chi-Square* nilai p-value = 0,000 ( $p < 0,05$ ), berarti terdapat hubungan antara dukungan suami terhadap kunjungan K4

**Kesimpulan :** Ada hubungan yang signifikan antara dukungan suami kunjungan K4.

**Kata kunci :** Dukungan Suami, Kunjungan K4

*The Relationship of Husband's Support to K4 Visits in Mudal and Slukatan Villages, Mojotengah District, Wonosoho Regency in 2021*  
(xv + 91 page +9 table +15 attachments)

#### ABSTRACT

**Background :** Complications in pregnancy and childbirth are the highest cause of maternal death, this can be prevented by regular antenatal care. The achievement of K4 visits in Mudal and Slukatan villages from 2019 to 2020 has decreased. In Mudal and Slukatan Villages, 10 pregnant women in the third trimester, 4 pregnant women received support from their husbands, did a complete ANC visit from 4 pregnant women who were given support, there was 1 pregnant woman who did not make an incomplete pregnancy visit. Meanwhile, 6 pregnant women were not provided with support, but on the visit status there were 4 pregnant women who did not make a complete visit and 2 other pregnant women did a complete visit.

**Research Objectives:** To determine the relationship between husband's support for K4 visits in Mudal and Slukatan Villages, Mojotengah District, Wonosobo Regency in 2021.

**Research Methods:** This study used a descriptive correlational design with a Case Control approach. The population in this study were TM III pregnant women with gestational age > 36 weeks totaling 78 pregnant women. The sampling technique used total sampling in the case sample as many as 31 respondents and in the control group using the purposive sampling technique as many as 38 respondents. analysis used. Data analysis using Chi-Square test.

**Research Results:** The results showed that some respondents received good support as much as 38 (55.1%) and complete K4 visits, and those who received less support were 31 (41.9%) and incomplete K4 visits. From the results of the univariate analysis, a small proportion of respondents with good support did not make incomplete K4 visits as many as 3 (9.7%), then a small proportion of respondents with less support did complete K4 visits as many as 3 respondents (7.2%). Based on the Chi-Square test,  $p\text{-value} = 0.000$  ( $p < 0.05$ ), it means that there is a relationship between husband's support for K4 visits

**Conclusion:** There is a significant relationship between husband's support for K4 visits.

**Keywords:** Husband's Support, K4 Visit
