HUBUNGAN PENGETAHUAN IBU HAMIL TENTANG ANTENATAL CARE DENGAN KUNJUNGAN K4 DI DESA MUDAL DAN SLUKATAN KECAMATAN MOJOTENGAH KABUPATEN WONOSOBO TAHUN 2021

(xiv + 106 halaman + 10 tabel + 2 bagan + 15 lampiran)

ABSTRAK

Latar Belakang : Komplikasi kehamilan dan persalinan sebagai penyebab tertinggi kematian ibu dapat dicegah dengan pemeriksaan kehamilan melalui *Antenatal Care* (ANC) secara teratur. Capaian K4 di Desa Mudal dan Slukatan dari tahun 2019 sampai 2020 terus mengalami penurunan. Di Desa Mudal dan Slukatan dari 8 ibu hamil trimester III didapatkan bahwa pada 2 ibu hamil mengatakan telah mengetahui tentang ANC dan kunjungannya lengkap. Sedangkan 6 ibu hamil mengatakan tidak mengetahui tentang ANC, namun pada status kunjungan ada 3 ibu hamil dengan kunjungan lengkap dan 3 ibu hamil lainnya kunjungan tidak lengkap.

Tujuan penelitian : Untuk mengetahui Hubungan Pengetahuan Ibu Hamil Tentang *Antenatal Care* (ANC) Dengan Kunjungan K4 Di Desa Mudal Dan Slukatan Kecamatan Mojotengah Kabupaten Wonosobo Tahun 2021.

Metode Penelitian : Penelitian ini menggunakan desain deskriptif korelasional dengan pendekatan *case control*. Populasi dalam penelitian ini adalah ibu hamil trimester III dengan usia kehamilan >36 minggu sebanyak 78 ibu hamil. Teknik sampling pada kelompok kasus menggunakan *total sampling* dengan jumlah sampel sebanyak 31 responden serta teknik sampling pada kelompok kontrol menggunakan *purposive sampling* sebanyak 38 responden. Analisis data menggunakan analisis *chi square*.

Hasil Penelitian : Didapatkan sebagian besar responden dengan pengetahuan kurang sebanyak 38 responden (55,1%), dan pada kunjungan K4 lengkap sebanyak 38 responden (55,1%). Diperoleh nilai *p value* sebesar $0,001 < \alpha (0,05)$, maka H_0 ditolak, artinya ada hubungan yang signifikan antara pengetahuan ibu hamil tentang *Antenatal Care* (ANC) dengan kunjungan K4.

Simpulan : Ada hubungan antara pengetahuan ibu hamil tentang *Antenatal Care* (ANC) dengan kunjungan K4.

Kata kunci : Pengetahuan, *Antenatal Care*, Kunjungan K4

RELATIONSHIP OF PREGNANT WOMEN'S KNOWLEDGE ABOUT ANTENATAL CARE WITH K4 VISIT IN MUDAL VILLAGE AND SLUKATAN, MOJOTENGAH DISTRICT, WONOSOBO REGENCY IN 2021

(xiv + 106 pages + 10 tables + 2 charts + 15 attachments)

ABSTRACT

Background : Complications of pregnancy and childbirth as the highest cause of maternal death can be prevented by regular antenatal care through antenatal care (ANC). K4 achievements in Mudal and Slukatan villages from 2019 to 2020 continued to decline. In Mudal and Slukatan Villages of 8 third trimester pregnant women it was found that 2 pregnant women said they had known about ANC and the visit was complete. Meanwhile, 6 pregnant women said they did not know about ANC, but on the visit status there were 3 pregnant women with complete visits and 3 other pregnant women with incomplete visits.

The purpose of the study : to determine the relationship between knowledge of pregnant women about Antenatal Care (ANC) with K4 visits in Mudal and Slukatan villages, Mojotengah sub-district, Wonosobo district in 2021.

Research Methods : This study uses a descriptive correlational design with a case control approach. The population in this study were third trimester pregnant women with gestational age > 36 weeks as many as 78 pregnant women. The sampling technique in the case group used total sampling with a sample of 31 respondents and the sampling technique in the control group using purposive sampling of 38 respondents. Data analysis using chi square analysis.

Research Results : It was found that most of the respondents with less knowledge were 38 respondents (55.1%), and 38 respondents (55.1%) had complete K4 visits. Obtained a p value of $0.001 < (0.05)$, then H_0 is rejected, meaning that there is a significant relationship between knowledge of pregnant women about Antenatal Care (ANC) and K4 visits.

Conclusion : There is a relationship between knowledge of pregnant women about Antenatal Care (ANC) with K4 visits.

Keywords : Knowledge, Antenatal Care, K4 Visit
