**Hubungan peran perawat sebagai edukator dengan pencegahan covid-19 pada masyarakat di desa tegalombo kabupaten pati
(xiv + 58 halaman + 2 gambar + 9 tabel + 17 lampiran)**

ABSTRAK

Latar belakang: Masa pandemi ini tenaga kesehatan khususnya perawat memiliki peran penting dalam menaggulangi dan memberikan edukasi pencegahan covid-19 kepada masyarakat. Perawat harus mampu memberikan penjelasan, menasehati, memfasilitasi dan memberikan contoh dalam pencegahan Covid-19.

Tujuan : Untuk mengetahui hubungan peran perawat sebagai edukator dengan pencegahan covid-19 pada masyarakat.

Metode: Penelitian ini menggunakan desain kuantitatif dengan pendekatan *crosssectional*. Populasi berjumlah 567 responden dengan jumlah sampel 235 responden dengan menggunakan teknik *purposive sampling*. Instrumen yang digunakan adalah kuesioner peran perawat sebagai edukator dan pencegahan covid-19. Analisa bivariat menggunakan *chi square*.

Hasil: Peran perawat sebagai edukator dalam kategori baik sejumlah 125 responden (53,2%), pencegahan covid-19 dalam katgeori baik sebanyak 123 responden (52,3%). Hasil uji statistik *chi square* didapatkan *p value* 0,000 yang berarti ada hubungan peran perawat sebagai edukator dengan pencegahan covid 19.

Kesimpulan: Terdapat hubungan peran perawat sebagai edukator dengan pencegahan covid 19 pada masyarakat di Desa Tegalombo Kabupaten Pati.

Saran: Diharapkan peneliti selanjutnya bisa mengontrol faktor yang mempengaruhi pencegahan covid-19 yaitu sikap lansia. selain itu faktor yang mempengaruhi peran perawat sebagai edukator seperti waktu pengajaran yang diberikan, kesiapan perawat

**THE RELATIONSHIP OF THE NURSE'S ROLE AS EDUCATOR WITH
COVID-19 PREVENTION IN THE COMMUNITY IN TEGALOMBO
VILLAGE, PATI REGENCY**

(xiv + 58 pages + 2 pictures + 9 tables + 17 attachments)

ABSTRACT

Background: During this pandemic, health workers, especially nurses, have an important role in tackling and providing education on the prevention of COVID-19 to the public. Nurses must be able to provide explanations, advise, facilitate and provide examples in preventing Covid-19

Objective: to find out the relationship between the role of nurses as educators with the prevention of covid-19 in the community.

Methods: this study used a quantitative design with a cross-sectional approach. The population was 567 respondents with a sample of 235 respondents used purposive sampling technique. The instrument used is a questionnaire on the role of nurses as educators and prevention of covid-19. Bivariate analysis used chi square.

Results: the role of nurses as educators in the good category is 125 respondents (53.2%), prevention of covid-19 in the good category is 123 respondents (52.3%). The results of the chi square test obtained a p value of 0.000 which means that there is a relationship between the role of nurses as educators and the prevention of covid 19.

Conclusion: There is a relationship between the role of nurses as educators and the prevention of covid 19 in the community in Tegalombo Village, Pati Regency

Suggestion: It is hoped that further researchers can control the factors that influence the prevention of COVID-19, namely the attitude of the elderly. In addition, factors that affect the role of nurses as educators such as the time of teaching given, nurse readiness
