Hubungan Antara Komunikasi Sbar (Situation, Background, Assessment, Recommendation) Dengan Pelaksanaan Enam Sasaran Keselamatan Pasien Oleh Perawat Di Ruang Rawat Inap RSUD Kota Salatiga

### **ABSTRAK**

**Latar Belakang :** Komunikasi SBAR adalah kerangka teknik yang disediakan untuk petugas kesehatan dalam menyampaikan kondisi pasien. Sasaran keselamatan pasien adalah sasaran sasaran yang menyoroti bidang-bidang yang bermasalah dalam perawatan kesehatan, memberikan bukti dan solusi hasil konsensus yang berdasarkan nasihat para pakar. Tujuan penelitian untuk mengetahui hubungan antara komunikasi SBAR (Situation, Background, Assessment, Reccoemdation) dengan pelaksanaan enam sasaran keselamatan pasien.

**Metode :** Penelitian ini menggunakan metode penelitian kuantitatif yang bersifat analitik korelasi dengan pendekatan *cross-sectional*. Poupulasi penelitian adalah perawat rawat inap RSUD Kota Salatiga sebanyak 132 perawat. Teknik penentuan sampel menggunakan purposive sampling sebanyak 99 responden. Instrument penelitian adalah kuesioner dengan analisis Kendall's Tau.

**Hasil :** Pada variabel komunikasi SBAR (Situation, Background, Assessment, Reccoemdation) terdapat 42 responden (42,4%) kategori baik dan 57 responden (57,6%) kategori kurang baik. Pada variabel pelaksanaan enam sasaran keselamatan pasien terdapat 39 responden (39,4%) pernah terjadi dan 60 responden tida pernah terjadi (60,6%) pernah. Nilai  $p$ -value  $0,000 < 0,05$  menyatakan ada hubungan antara komunikasi SBAR (Situation, Background, Assessment, Reccoemdation) dengan pelaksanaan enam sasaran keselamatan pasien.

**Simpulan :** Aada hubungan antara komunikasi SBAR (Situation, Background, Assessment, Reccoemdation) dengan pelaksanaan enam sasaran keselamatan pasien.

**Saran :** Diharapkan adanya peningkatan komunikasi SBAR (Sitution, Background, Assessment, Recomemndation) dan pelaksanaan enam sasaran keselamatan pasien.

**Kata Kunci :** Komunikasi SBAR, pelaksanaan enak sasaran keselamatan pasien

The Relationship Between Sbar Communication (Situation, Background, Assessment, Recommendation) With The Implementation Of Six Patient Safety Goals By Nurses In The Inpatient Room Of The Salatiga City Hospital

### **ABSTRACT**

**Background:** SBAR communication is a technical framework provided for health workers in conveying the patient's condition. Patient safety goals are goals that highlight problematic areas in health care, provide evidence and consensus-driven solutions based on expert advice. The purpose of the study was to determine the relationship between SBAR (Situation, Background, Assessment, Recommendation) communication with the implementation of the six patient safety goals.

**Methods:** This study uses a quantitative research method that is analytic correlation with a cross-sectional approach. The population of the study was inpatient nurses at the Salatiga City Hospital as many as 132 nurses. The sampling technique used purposive sampling as many as 99 respondents. The research instrument is a questionnaire with Kendall's Tau analysis.

**Results:** In the SBAR communication variable (Situation, Background, Assessment, Recognition) there are 42 respondents (42.4%) in the good category and 57 respondents (57.6%) in the poor category. In the implementation variable of the six patient safety goals, 39 respondents (39.4%) had it happen and 60 respondents had never happened (60.6%). The  $p$ -value  $0.000 < 0.05$  indicates that there is a relationship between SBAR (Situation, Background, Assessment, Recommendation) communication with the implementation of the six patient safety goals.

**Conclusion:** There is a relationship between SBAR communication (Situation, Background, Assessment, Recommendation) with the implementation of the six patient safety goals.

**Suggestion:** *It is hoped that there will be an increase in SBAR communication (Situation, Background, Assessment, Recommendation) and the implementation of the six patient safety goals.*

**Keywords:** SBAR communication, implementation of the six patient safety goals
