HUBUNGAN PENGETAHUAN TENTANG KONTRASEPSI SUNTIK 3 BULAN DENGAN PENGGUNAAN ALAT KONTRASEPSI SUNTIK 3 BULAN PADA AKSEPTOR KB NON METODE KONTRASEPSI JANGKA PANJANG DI PMB HENI SUHARNI UNGARAN BARAT

(xvi + 51 Halaman + 8 Tabel + 2 Bagan + 10 Lampiran)

ABSTRAK

Latar Belakang : Studi pendahuluan Di PMB Heni Suharni pada 10 akseptor KB Non MKJP didapatkan hasil 4 responden mengetahui pengertian, keuntungan, kapan harus kunjungan ulang, efek samping dari KB suntik 3 bulan serta responden menggunakan suntik 3 bulan berjumlah 2 responden, pil berjumlah 2 responden dan didapatkan 6 responden tidak mengetahui pengetahuan, keuntungan, dan efek samping dari KB suntik 3 bulan serta responden menggunakan suntik 3 bulan berjumlah 2 responden, pil berjumlah 2 responden, serta suntik 1 bulan berjumlah 2 responden.

Tujuan Penelitian : Untuk mengetahui hubungan pengetahuan tentang kontrasepsi dengan penggunaan alat kontrasepsi suntik 3 bulan di PMB Heni Suharni Ungaran Barat.

Metode : Penelitian ini menggunakan desain analitik Korelasional dengan pendekatan *cross sectional*. Populasi yaitu seluruh akseptor KB Non MKJP bulan Desember 2021 di PMB Heni Suharni Ungaran Barat berjumlah 56. Teknik pengambilan sampel menggunakan *Purposivel Sampling* sebanyak 53 responden. Instrument penelitian Buku Register kunjungan KB dan Kuesioner. Data dianalisis dengan uji analisis chi-square.

Hasil : Uji statistik Chi Square pengetahuan dan penggunaan suntik 3 bulan dengan nilai P value=0,012 < α (0,05), maka Ho ditolak, artinya ada hubungan antara pengetahuan tentang kontrasepsi suntik 3 bulan dengan penggunaan alat kontrasepsi suntik 3 bulan di PMB Heni Suharni Ungaran Barat.

Simpulan : Kesimpulannya ada hubungan antara pengetahuan tentang kontrasepsi suntik 3 bulan dengan penggunaan alat kontrasepsi suntik 3 bulan di PMB Heni Suharni Ungaran Barat

Kata Kunci : Pengetahuan, Non MKJP, Suntik 3 bulan

RELATIONSHIP OF KNOWLEDGE ABOUT 3 MONTHS INJECTING CONTRACEPTION WITH THE USE OF 3 MONTHS CONTRACEPTION EQUIPMENT WITH NON-MKJP INJECTIVE CONTRACEPTION ACCEPTERS

(xvi + 51 pages + 8 tables + 2 charts + 10 attachments)

ABSTRACT

Background: Preliminary study at PMB Heni Suharni on 10 non-MKJP family planning acceptors, it was found that 4 respondents knew the meaning, benefits, when to revisit, side effects of 3-month injection KB and respondents used 3-month injections totaled 2 respondents, pills amounted to 2 respondents and it was found that 6 respondents did not know the definition, benefits, and side effects of 3-month injections of contraception and 2 respondents who used 3-month injections, 2 respondents with pills, and 2 respondents with 1-month injections.

Research Objectives: To determine the relationship between knowledge about contraception and the use of injectable contraceptives for 3 months at PMB Heni Suharni Ungaran Barat.

Methods: This study used a correlational analytic design with a *cross sectional approach*. The population is all non-MKJP family planning acceptors month December 2021 at PMB Heni Suharni Ungaran Barat totaled 56. The sampling technique used a *Purposvel sampling* of 53 respondents. Research Instruments KB Visit Register Book and Questionnaire. Data were analyzed by chi-square analysis test.

Results: Chi Square statistical test of knowledge and use of 3-month injection with $P \text{ value} = 0.012 < (0.05)$, then H_0 is rejected, meaning that there is a relationship between knowledge of 3-month injectable contraception and 3-month injectable contraceptive use at PMB Heni Suharni Ungaran Barat.

Conclusion: In conclusion, there is a relationship between knowledge about 3-month injectable contraceptives and the use of 3-month injectable contraceptives at PMB Heni Suharni Ungaran Barat

Keywords: Knowledge, Non MKJP, 3-month injection
