**"Description of Nurse *Caring* Behavior at the Welahan Health Center, Jepara Regency during the Covid-19 Pandemic".**

#### ABSTRACT

**Background:** *Caring* is a form of nurse's concern for clients as a form of attention, appreciation and being able to meet their needs. The existing phenomenon shows that during the covid-19 pandemic, there are still nurses who are not *Caring* enough for clients, so there are complaints of nurses not paying attention to the comfort of clients. The purpose of this study was to describe the *Caring* behavior of nurses at the Welahan Public Health Center, Jepara Regency during the Covid-19 pandemic.

**Methods:** The design of this research is descriptive with a survey approach. The population in this study were patients at the Welahan Health Center, Jepara Regency with a sample of 47 people who were taken by total sampling technique.

**Results:** Most of the patients at the Welahan Health Center, Jepara Regency were aged 36-45 years (40.4%), male (55.3%), secondary education (51.1%) and worked as laborers (36.2 %). The *Caring* behavior of nurses at the Welahan Health Center, Jepara Regency during the Covid-19 Pandemic was mostly in the good category (61.7%). The *Caring* behavior of nurses is in good category where most of them are 36-45 years old (44.8%), female (51.7%), secondary education (48.3%) and work as laborers (37.9%).

**Suggestion:** Nurses should provide the information needed by the patient, including related to the cost of care if the patient is needed before discharge so that the patient's discharge process is not delayed.

**Keywords:** *Caring* behavior of nurses, covid-19 pandemic
