## HUBUNGAN STATUS PEKERJAAN DENGAN USIA MENIKAH DI KUA UNGERAN BARAT

### ABSTRAK

**Latar Belakang:** Pernikahan dini merupakan masalah yang dihadapi oleh masyarakat global. Setiap hari terdapat 39.000 pernikahan usia dini di dunia dan diperkirakan akan terdapat 140 juta pernikahan usia dini dari 2011 hingga 2020. Fenomena pernikahan dini masih menjadi fenomena yang mengkhawatirkan di dunia. Faktor pekerjaan dapat menjadi tolak ukur kondisi seorang pekerja dan masalah kesehatan setempat yang berpatokan pada status sosial ekonomi daerah tersebut. Dikatakan pula terdapat hubungan tertentu antara pekerjaan yang dilakukan oleh remaja perempuan terhadap usia pernikahan. Pekerjaan secara tidak langsung mencerminkan masalah kesehatan, ekonomi, status sosial, pendapatan, maupun pendidikan orang tersebut. Penelitian yang dilakukan menunjukkan bahwa tidak ada hubungan antara pekerjaan dengan peningkatan fenomena pernikahan usia dini di masyarakat.

**Tujuan :** penelitian ini dilakukan untuk mengetahui hubungan status pekerjaan dengan usia menikah di KUA Ungaran Barat.

**Metode :** Desain Penelitian ini merupakan penelitian *Deskriptif*. Populasi dalam penelitian ini adalah data seluruh calon pengantin dari bulan Januari-Desember 2022 sejumlah 318 pasangan. Dalam penelitian ini terdapat dua variable bebas (*independen*) yaitu status pekerjaan dan variable dependen yaitu usia menikah. Data yang digunakan yaitu data sekunder. Analisis data menggunakan analisa univariat dan analisa bivariat dengan uji *chi-square*.

**Hasil Penelitian :** Hasil penelitian ini menunjukkan sebagian besar status pekerjaan dalam usia menikah calon pengantin kategori bekerja dengan total yaitu 298 orang yakni 288 responden (96.6%) tidak menikah usia dini sedangkan 10 orang (3.4%) menikah uisa dini. Pada uji *chi square* didapatkan hasil *P-value*  $0.000 < \alpha = 0.05$  Dengan hasil tersebut menunjukkan bahwa ada hubungan yang signifikan Antara Status Pekerjaan Dengan Usia Menikah Calon Pengantin di Kua Ungaran Barat.

**Kesimpulan :** Didapatkan hasil pwenelitian bahwa mayoritas pekerjaan responden yang brkerja sebagai karyawan swasta sebanyak 170 (53,4%), menikah usia dini sebanyak 10 (3,4%). Sehingga terdapat hubungan yang signifikan Antara Status Pekerjaan Dengan Usia Menikah di Kua Ungaran Barat

**Kata kunci :** Status Pekerjaan, Usia Menikah.

## **RELATIONSHIP BETWEEN WORK STATUS AND MARRIAGE AGE IN KUA UNGARAN BARAT**

### **ABSTRACT**

**Background:** Early marriage is a problem faced by the global community. every day there are 39,000 early marriages in the world and it is estimated that there will be 140 million early marriages from 2011 to 2020. The phenomenon of early marriage is still a worrying phenomenon in the world. Occupational factors can be a benchmark for the condition of a worker and local health problems based on the socio-economic status of the area. It is also said that there is a certain relationship between the work done by young women and the age of marriage. Occupation indirectly reflects the person's health, economic, social status, income, and education problems. The research conducted shows that there is no relationship between work and an increase in the phenomenon of early marriage in society.

**Purpose:** This research was conducted to determine the relationship between employment status and age of marriage at KUA Ungaran Barat.

**Village :** Design This research is a descriptive research. The population in this study is data on all prospective brides and grooms from January to December 2022 totaling 318 couples. In this study there were two independent variables, namely employment status and the dependent variable, namely age of marriage. The data used is secondary data. Data analysis used univariate analysis and bivariate analysis with chi-square test.

**Research Results:** The results of this study indicate that most of the employment status in the marriageable age of the bride and groom is in the working category with a total of 298 people, namely 288 respondents (96.6%) did not marry at an early age while 10 people (3.4%) married at an early age. In the chi square test, the results obtained were  $P\text{-value } 0.000 < \alpha = 0.05$ . These results indicate that there is a significant relationship between employment status and age of marriage of prospective brides in Kua Ungaran Barat.

**Conclusion:** The results show It was found that the majority of respondents worked as private employees as many as 170 (53.4%), married at an early age as many as 10 (3.4%). that there is a significant relationship between employment status and age at marriage in Kua Ungaran Barat

**Key words:** Employment Status, Age of Marriage.
