**GAMBARAN PERSALINAN  
DI PMB EKA SETYOWATI, S.Tr. Keb. TEMBALANG  
KOTA SEMARANG JAWA TENGAH**

**ABSTRAK**

**Latar Belakang:** Angka kematian ibu di Indonesia pada tahun 2020 menunjukkan 4.627. Jumlah ini menunjukkan peningkatan dibandingkan tahun 2019 sebesar 4.221. Persalinan lama adalah persalinan yang berjalan lebih dari 24 jam untuk primipara, dan lebih dari 18 jam untuk multipara. Tujuan dari penelitian ini Untuk mengetahui “Gambaran Persalinan di PMB Eka Setyowati, S.Tr. Keb. Tembalang Kota Semarang Jawa Tengah”

**Metode Penelitian:** kuantitatif *deskriptif kuantitatif*. Populasi dalam penelitian ini adalah ibu bersalin, dengan responden sebanyak 60 orang, Data yang digunakan data sekunder dilihat dari buku register bersalin di PMB Eka Setyowati teknik pengambilan sampel menggunakan *total sampling*

**Hasil:** Berdasarkan hasil penelitian di dapatkan dari 60 ibu bersalin mayoritas berusia < 20 tahun terdapat sebanyak 1 (1,7%) usia 20-35 terdapat 54 (90,0%) dan usia >35 terdapat 5 (8,3%), berdasarkan paritas mayoritas responden primipara ada 36 (60,0%) dan untuk multipara terdapat 24 (40,0%) orang. Berdasarkan usia kehamilan terdapat ibu atrem 56 (93,3%) untuk preterm ada 4 (6,7%), lama persalinan normal ada 52 (86,7%) persalinan lambat ada 8 (13,3%), sedangkan untuk berat bayi 2500-4000 ada 60 (100,0%).

**Simpulan:** Dari hasil penelitian yang sudah dilakukan terdapat beberapa resiko yang dapat terjadi pada ibu bersalin usia, paritas, usia kehamilan, lama persalinan dan berat badan bayi.

**Kata kunci:** Gambaran, Persalinan, PMB

***THE EFFECT OF HYPNOBIRTHING ON DELIVERY LONG  
AT PMB EKA SETYOWATI, S.Tr. Keb. TEMBALANG  
SEMARANG CITY CENTRAL JAVA***

***ABSTRACT***

**Background:** The maternal mortality rate in Indonesia in 2020 is 4,627. This number shows an increase compared to 2019 of 4,221. Prolonged labor is labor that lasts more than 24 hours for primiparas and more than 18 hours for multiparas. The purpose of this study is to find out "Description of Childbirth at PMB Eka Setyowati, S.Tr. b. Tembalang City of Semarang, Central Java"

**Research Methods:** quantitative descriptive quantitative. The population in this study were mothers giving birth, with as many as 60 respondents. The data used was secondary data seen from the maternity register book at PMB Eka Setyowati. The sampling technique used was total sampling.

**Results:** Based on the results of the study, it was found that from 60 mothers, the majority were aged <20 years, there were 1 (1.7%) aged 20-35, there were 54 (90.0%) and aged >35, there were 5 (8.3%). based on parity, the majority of primiparous respondents were 36 (60.0%) and for multiparas there were 24 (40.0%) people. Based on gestational age, there were 56 atrem mothers (93.3%) for preterm there were 4 (6.7%), normal duration of labor there were 52 (86.7%) slow labor there were 8 (13.3%), while for the baby's weight 2500-4000 there are 60 (100.0%).

**Conclusion:** From the results of the research that has been done, there are several risks that can occur in mothers who give birth, age, parity, gestational age, length of labor and baby's weight.
