PERBEDAAN SIKAP REMAJA PEREMPUAN TERHADAP PERNIKAHAN DINI SEBELUM DAN SESUDAH DIBERIKAN PENDIDIKAN KESEHATAN

ABSTRAK

Latar Belakang: Angka kejadian pernikahan dini yang terjadi di Kecamatan Bawen yang meliputi 9 Desa/Kelurahan dengan jumlah 26 kejadian pernikahan dini dari tahun 2022 sampai dengan triwulan pertama di tahun 2023. Desa yang mendominasi angka kejadian pernikahan dini tertinggi di kecamatan Bawen adalah Desa Lemah ireng yaitu sebanyak 6 kejadian pernikahan dini di kecamatan Bawen terjadi di Dusun Krajan, Desa Lemahireng.

Tujuan Penelitian: Mengetahui Perbedaan Sikap Remaja Perempuan terhadap Pernikahan Dini Sebelum dan Sesudah diberikan Pendidikan Kesehatan

Metode: Desain penelitian yang digunakan adalah *Quasi Eksperimen* Pendekatan dalam penelitian ini menggunakan *Pre-Eskperimental One-Group Pretest-Posttest Design*. Populasi penelitian adalah remaja perempuan usia 11-14 tahun sebanyak 115 dengan sampel sebanyak 20. Analisis univariat yang digunakan dengan membuat tabel distribusi frekuensi dan sebaran data dalam bentuk tabel, Analisis Bivariat menggunakan Analisis data dengan uji statistik *Wilcoxon Signed Rank Test*

Hasil: hasil analisis data menggunakan *Wilcoxon Signed rank test* didapatkan nilai signifikan $p \text{ value} = 0,011 < \alpha 0,05$. dari data yang diperoleh maka disimpulkan terdapat Perbedaan Sikap Remaja Perempuan terhadap Pernikahan Dini Sebelum dan Sesudah Diberikan Pendidikan Kesehatan.

Kesimpulan: hasil penelitian yang dilakukan tentang Perbedaan Sikap Sebelum dan Sesudah Pendidikan Kesehatan terdapat perbedaan sikap remaja perempuan terhadap pernikahan dini sebelum dan sesudah diberikan pendidikan kesehatan.

Saran : kepada peneliti selanjutnya yang ingin melanjutkan penelitian ini objek penelitian ini diharapkan dapat di perluas sehingga mendapatkan hasil yang lebih baik

Kata Kunci: Pendidikan Kesehatan, Sikap, Remaja Putri, Pernikahan Dini

THE EFFECT OF HEALTH EDUCATION ON EARLY MARRIAGE WITH ADOLESCENT GIRLS' ATTITUDES TOWARDS EARLY MARRIAGE

ABSTRACT

Background: The number of early marriage incidents that occurred in Bawen District, which includes 9 villages with a total of 26 early marriage incidents from 2022 until the first quarter of 2023. The village that dominates the highest number of early marriage incidents in Bawen District is Lemah Ireng Village, which has 6 early marriage incidents in Krajan Hamlet, Lemahireng Village.

Research Objective: To Determine Differences in Attitudes of Adolescent Girls towards Early Marriage Before and After Given Health Education" ¹.

Method : The research design used is Quasi Experiment. The approach in this study uses Pre-Experimental One-Group Pretest-Posttest Design. The study population is 115 adolescent girls aged 11-14 years with a sample of 20. Univariate analysis is used by creating frequency distribution tables and data distribution in the form of tables. Bivariate analysis uses data analysis with the Wilcoxon Signed Rank Test statistical test.

Results : The results of data analysis using Wilcoxon Signed rank test obtained a significant value p value = 0.011 < a 0.05. From the data obtained, it was concluded that there were differences in the attitudes of adolescent girls towards early marriage before and after being given health education.

Conclusion : results of research conducted on Differences in Attitudes Before and After Health Education show that there are differences in the attitudes of adolescent girls towards early marriage before and after being given health education.

Suggestion: for future researchers who want to continue this research, it is hoped that the object of this research can be expanded so that better results can be obtained.

Keywords: Health Education, Attitude, Adolescent Girls, Early Marriage
