GAMBARAN PERILAKU *CARING* PERAWAT DI RUANG RAWAT INAP RSUD dr. GUNAWAN MANGUNKUSUMO

ABSTRAK

Latar Belakang : *Caring* adalah rasa kasih sayang, komitmen, hati nurani, kepercayaan, dan ketaatan yang dimiliki oleh seorang perawat dalam merawat pasien.

Tujuan : Penelitian ini dilakukan untuk mengetahui gambaran perilaku *caring* perawat di ruang rawat inap RSUD dr. Gunawan Mangunkusumo.

Metode : Jenis penelitian ini adalah penelitian kuantitatif menggunakan desain deskriptif dengan metode survey. Populasi dalam penelitian ini seluruh perawat pelaksana di ruang rawat inap medikal bedah sebanyak 50 perawat pelaksana. Sampel pada penelitian ini ditentukan dengan *purposive sampling* dengan responden yang memenuhi kriteria berjumlah 44 responden yang bekerja di ruang rawat inap medikal bedah. Alat ukur penelitian ini menggunakan kuesioner CBINT (*Caring Behavior of Indonesian Nurses Tool*).

Hasil : Hasil data didapatkan sebanyak 41 perawat (93,2%) memiliki perilaku *caring* sangat baik dan sebanyak 3 perawat (6,8%) memiliki perilaku *caring* baik.

Simpulan : Gambaran perilaku *caring* perawat di ruang inap dewasa RSUD dr. Gunawan Mangunkusumo dalam kategori *caring* sangat baik.

Saran : Diharapkan responden dapat mempertahankan perilaku *caring* dan melakukan pelatihan keterampilan secara berkala untuk meningkatkan mutu asuhan keperawatan.

Kata Kunci : Perawat, Rumah Sakit, Perilaku *Caring*

DESCRIPTION OF CARING BEHAVIOR OF NURSES IN THE INPATIENT ROOM OF Dr. GUNAWAN MANGUNKUSUMO HOSPITAL

ABSTRACT

Background : Caring is a sense of compassion, commitment, conscience, trust, and obedience possessed by a nurse in caring for patients.

Objective : This study was conducted to determine the description of caring behavior of nurses in the inpatient room of Dr. Gunawan Mangunkusumo Hospital.

Methods : This type of research is quantitative research using descriptive design with survey method. The population in this study were all executive nurses in the medical-surgical inpatient room as many as 50 executive nurses. The sample in this study was determined by purposive sampling with respondents who met the criteria totaling 44 respondents who worked in the surgical medical inpatient room. The measuring instrument for this study used the CBINT (Caring Behavior of Indonesian Nurses Tool) questionnaire.

Results : The data results showed that 41 nurses (93.2%) had very good caring behavior and 3 nurses (6.8%) had good caring behavior.

Conclusion : The description of caring behavior of nurses in the adult inpatient room of RSUD Dr. Gunawan Mangunkusumo is in the category of very good caring.

Suggestion : It is expected that respondents can maintain caring behavior and conduct regular skills training to improve the quality of nursing care.

Keywords : Nurse, Hospital, Caring Behavior
