HUBUNGAN DUKUNGAN KELUARGA DENGAN KEPATUHAN MINUM OBAT PADA PASIEN TUBERKULOSIS HASIL PEMERIKSAAN TCM (+) DI WILAYAH KERJA PUSKESMAS KEDUNGWUNI I KAB. PEKALONGAN

ABSTRAK

Latar belakang : Penyakit tuberkulosis merupakan penyebab kematian paling banyak di dunia, setiap tahun terdapat 10 juta kasus tuberkulosis. Peran keluarga sangat berpengaruh terhadap kesembuhan penyakit tuberkulosis, dan kepatuhan minum obat juga sangat berpengaruh dalam kesuksesan pengobatan. Salah satu faktor yang mempengaruhi kepatuhan pasien minum obat adalah dukungan keluarga,

Tujuan: Untuk mengetahui hubungan dukungan keluarga dengan kepatuhan minum obat pada pasien tuberkulosis hasil pemeriksaan TCM (+) di wilayah kerja Puskesmas Kedungwuni I Kabupaten Pekalongan.

Metode: Desain penelitian menggunakan metode deskriptif korelatif, pengumpulan dengan kuesioner sebanyak 68 responden, tehnik pengambilan sampel menggunakan *Accidental Sampling*, kuesioner di uji validitas dan *reliabilitas*. Analisa menggunakan uji Kolmogorov-spirnov.

Hasil: Hasil penelitian peran keluarga yang mendukung pasien sebanyak 94,1% sedangkan tingkat kepatuhan minum obat kategori tinggi 80,6%, Uji bivariat menunjukkan hubungan dukungan keluarga dengan kepatuhan minum obat pasien tuberkulosis dengan p-value > 0,05.

Kesimpulan: Tidak ada hubungan yang signifikan antara dukungan keluarga dengan kepatuhan minum obat pada pasien tuberkulosis hasil pemeriksaan TCM (+) di wilayah kerja Puskesmas Kedungwuni I Kabupaten Pekalongan.

Kata kunci : Peran keluarga, Kepatuhan minum obat, Tuberkulosis
