(DESCRIPTION OF FRUIT AND VEGETABLE EATING BEHAVIOR AND
CHARACTERISTICS OF STUDENTS AT SDN PLEDOKAN SUMOWONO)

ABSTRACT

Background: This research is based on the fact that fruit and vegetable consumption in children significantly affects their growth. However, according to the research findings, children over the age of 5 should consume at least 5 servings per day. In Central Java in 2023, the consumption of fruits and vegetables was reported as follows: 64.7% (1-2 servings per day), 26.4% (3-4 servings per day), 3.8% (≥ 5 servings per day), and 5.1% did not consume fruits and vegetables at all, indicating that their intake is still considered insufficient.

Methods: The method used in this research is descriptive qualitative with a descriptive survey research design using a descriptive statistical approach. The population and sample in this study were taken using total sampling technique, with a population of 40 students aged 7-14 years at SDN Pledokan Sumowono. The variables examined in this research are the eating behavior of fruits and vegetables and the characteristics of the students, namely gender and age. This study was conducted using a questionnaire.

Results: This study describes the number of fruit and vegetable eating behaviors among students, the average consumption of fruits and vegetables among students, and also the average consumption of fruits and vegetables based on their characteristics.

Conclusion: From the results obtained in this study, it is known that the eating behavior of fruits and vegetables among students at SDN Pledokan is depicted.

Keywords: Eating behavior of fruits and vegetables, Characteristics of Students.
