Universitas Ngudi Waluyo

Setiap pasien yang terpasang *tracheostomy* pasti akan didampingi oleh petugas yang terlatih dan berkompeten dalam melakukan tindakan keperawatan. Meski pasien selalu didampingi dengan petugas namun beban kerja yang dialami oleh perawat di dalam ruang rawat inap menyebabkan pelaksanaan perawatan luka *tracheostomy* tidak berjalan dengan lancar dan pasien kembali harus menjalani perawatan di ruang intensif. Tujuan penulisan karya kinerja adalah untuk meningkatkan kualitas pelayanan keperawatan dan juga pemahaman perawat terutama dalam melakukan perawatan luka *tracheostomy* dengan modifikasi lembar checklist Perawatan luka *tracheostomy*. Karya kinerja ini berbentuk laporan karya pengembangan secara deskriptif. Pelaksanaan karya kinerja dilakukan selama tanggal 30 Desember 2024 – 15 Januari 2025 di ruang rawat inap RSUD dr.H.Jusuf.SK. Hasil evaluasi peneliti terhadap sosialisasi dan penerapan lembar checklist efektif dalam melaksanakan fungsi monitoring tindakan perawatan luka pada pasien tracheostomi, karena kepala ruangan dapat mengetahui apakah kinerja perawat sudah sesuai dengan standart operasional prosedur atau tidak dan dapat dilakukan evaluasi perbaikan kinerja. Diharapkan dapat meningkatkan ketrampilan dalam melakukan perawatan luka tracheostomi melalui mengikuti seminar atau pelatihan sehingga dapat meningkatkan pelayanan yang diberikan kepada pasien tracheostomi dan kepuasan pasien semakin meningkat

Kata Kunci : Perawatan Luka, Tracheostomi. Lembar Checklist

ABSTRACT

IMPROVING THE QUALITY OF TRACHEOSTOMY WOUND CARE THROUGH MODIFICATION OF THE WOUND CARE CHECKLIST IN THE INPATIENT ROOM OF Dr. RSUD. H. JUSUF. SK

Every patient who has a tracheotomy installed will definitely be accompanied by staff who are trained and competent in carrying out nursing procedures. Even though the patient is always accompanied by staff, the workload experienced by nurses in the inpatient room means that the implementation of tracheostomy wound care does not run smoothly and the patient has to undergo treatment in the intensive care unit again. The purpose of writing performance work is to improve the quality of nursing services and also the understanding of nurses, especially in carrying out tracheostomy wound care by modifying the tracheotomy wound care checklist sheet. This performance work is in the form of a descriptive development work report. The performance work was carried out during 30 December 2024 – 15 January 2025 in the inpatient room at Dr.H.Jusuf.SK Regional Hospital. The results of the researcher's evaluation of the socialization and application of the checklist sheet were effective in carrying out the function of monitoring wound care actions for tracheostomy patients, because the head of the room could find out whether the nurse's performance was in accordance with standard operational procedures or not and performance improvement evaluations could be carried out. It is hoped that we can improve our skills in caring for tracheostomy wounds through attending seminars or training so that we can improve the services provided to tracheostomy patients and increase patient satisfaction.
