**Hubungan Status Gizi Dengan Perkembangan Anak Usia Prasekolah Di Paud  
Genuk Ungaran Barat**  
**(xv + 56 halaman + 4 tabel + 2 gambar + 8 lampiran)**

**ABSTRAK**

Banyak faktor yang mempengaruhi perkembangan anak. terdiri dari faktor internal (genetik) dan faktor eksternal (lingkungan). Status gizi mempengaruhi perkembangan anak usia prasekolah. Hal ini dapat dilihat dari beberapa hasil penelitian yang telah dilakukan. Tujuan penelitian untuk mengetahui hubungan status gizi dengan perkembangan anak usia prasekolah di Paud Genuk Ungaran Barat.

Desain penelitian deskriptif *korelasional* dengan pendekatan *cross sectional*. Populasi dalam penelitian ini adalah anak usia prasekolah di Genuk Ungaran Barat sebanyak 112 anak. Teknik Sampling dalam penelitian ini menggunakan *total sampling* jumlah sampel 112 orang. Instrumen yang digunakan lembar observasi. Analisis data dengan menggunakan *kendall tau*.

Sebagian besar status gizi anak usia prasekolah di PAUD Genuk Ungaran Barat normal sebanyak 76 responden (67,9%), kurus sebanyak 22 responden (19,6%) dan gemuk sebanyak 14 responden (12,5%). Sebagian besar perkembangan anak usia prasekolah di PAUD Genuk Ungaran Barat normal sebanyak 108 responden (96,4%), *suspect* sebanyak 3 responden (2,7%) dan *untestable* sebanyak 1 responden (0,9%). Ada hubungan yang signifikan antara status gizi dengan perkembangan anak usia prasekolah di PAUD Genuk Ungaran Barat.

Orang tua dapat menambah wawasan tentang kebutuhan nutrisi anak dan perkembangan anak dan memperhatikan gizi anak sehingga orang tua dapat memberikan gizi yang cukup untuk anak

**Relationship of Nutrition Status with the Development of Preschool Age Children in Paud Genuk, West Ungaran**

**(xv + 56 pages + 4 tables + 2 pictures + 8 attachments)**

**ABSTRACT**

Many factors affect the child's development. consists of internal factors (genetic) and external factors (environmental). Nutritional status influences the development of preschool children. This can be seen from the results of several studies conducted. The purpose of this study was to determine the relationship of nutritional status with the development of preschool age children in Paud Genuk Ungaran Barat.

Descriptive correlational research design with cross sectional approach. The population in this study were 112 preschoolers in Genuk Ungaran Barat. Sampling technique in this study used a sample size of 112 people. The instrument used was the observation sheet. Data analysis using kendall tau.

Most of the nutritional status of preschool children in PAUD Genuk Ungaran Barat normal were 76 respondents (67.9%), thin were 22 respondents (19.6%) and obese were 14 respondents (12.5%). Most of the development of preschool age children in PAUD Genuk Ungaran Barat normal were 108 respondents (96.4%), suspect were 3 respondents (2.7%) and untestable were 1 respondent (0.9%). There is a significant relationship between nutritional status and the development of preschool children in PAUD Genuk West Ungaran.

Parents can add insight about children's nutritional needs and child development and pay attention to children's nutrition so that parents can provide adequate nutrition for children
