HUBUNGAN BEBAN KERJA PERAWAT DENGAN KELENGKAPAN PENGISIAN PENDOKUMENTASIAN *SURGICAL SAFETY CHECKLIST(SSC)* METODE *ELECTRONIC MEDICAL RECORD(EMR)* DI RUANGAN INSTALASI BEDAH SENTRAL RSUP DR. MOHAMMAD HOESIN PALEMBANG

ABSTRAK

Latar belakang: Pelayanan keperawatan di rumah sakit memegang peran strategis, dimana kebanyakan tenaga kesehatan adalah para perawat yang memberikan asuhan keperawatan. Beban kerja yang tidak seimbang akan mempengaruhi kerja dan layanan keperawatan sehingga layanan keperawatan akan kurang maksimal dan perawat akan mengabaikan tugasnya. Dokumentasi merupakan salah satu mekanisme tanggung jawab profesional yang tinggi tingkatannya yang harus dilakukan oleh seorang perawat.
Tujuan Penelitian: menganalisis hubungan beban kerja dengan pendokumentasian *surgical safety checklist* (SSC) metode EMR di Ruangan Instalasi Bedah Sentral RSUP Dr.Mohammad Hoesin Palembang. **Metode Penelitian:** Penelitian ini menggunakan desain penetian *cross-sectional* dengan metode *total sampling* sejumlah 30 orang responden. Analisis Chi- Square didapatkan hasil bahwa sebagian besar responden memiliki beban kerja berat sebanyak 60% (18 orang), dan kelengkapan *surgical safety checklist* (SSC) EMR yang lengkap lebih dari separu sebanyak 80%. Hasil analisis didapatkan tidak ada hubungan antara beban kerja dengan pendokumentasian (p 0,709) SSC metode EMR. **Kesimpulan**: Tidak adanya hubungan beban kerja dengan pendokumentasian sehingga menjadi dasar pentingnya melengkapi dokumentasi keperawatan.

Kata Kunci : Beban kerja, *Surgical Safety Checklist, Electronic Medical Record*

RELATIONSHIP BETWEEN NURSE'S WORKLOAD WITH COMPLETENESS DOCUMENTATION OF SURGICAL SAFETY CHECKLIST (SSC) ELECTRONIC MEDICAL RECORD (EMR) SURGICAL INSTALLATION ROOM OF DR. MOHAMMAD HOESIN PALEMBANG HOSPITAL

ABSTRACT

Backgroud: *Nursing services in hospitals play a strategic role, where most health workers are nurses who provide nursing care. An unbalanced workload will affect nursing work ang services so that nursing services will be less than optimal and nurses will neglected their duies. Documentation is one of the mehanisms of high-level responsibility that must be carried out by a nurse.* ***Objective****: to analyze the relationship of workload with documentation of Surgical safety Checklist (SSC) EMR method in Central Surgical Installation Room of Dr. Mohammad Hoesin Palembang Hospital.* ***Methode:*** *This study used a cross sectional research design with a total sampling methode of 30 respondents.* ***Result:*** *Chi-Square analysis showed that most respondents had a moderate workload of 60% (18 people), and the completeness of the EMR surgical safety checklist (SSC) was more thsn half of 80%. The results of the analysis showed the there was no relationship between workload and documentation (p 0,709) of the EMR methode SSC.* ***Conclusion :*** *There is no relationship between workload and documentatiton, which is the basis for the importace of completing nursing documentation.*

Keywords*: Wokload, Electronic Medical Record, Surgical Safety Checklist, Nursing Documentation.*
